Product Bulletin

Co-Ral™ Fly and Tick Spray

EPA Reg. No. 11556-115

For control of adult (fly) *Cochliomyia hominivorax* (New World screwworm)

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATES OF AL, AR, FL, GA, LA, MS, NC, NM, SC, AND TN

FIFRA Section 2(ee) Recommendation

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or accepted by the U.S. Environmental Protection Agency.

It is a violation of federal law to use this product in a manner inconsistent with its label.

This product bulletin must be in the possession of the user at the time of pesticide application.

All applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label must be followed.

This product has not been tested specifically for efficacy against New World screwworm (NWS, adults or larvae); however, applied as part of an integrated pest management plan, it may have preventative action against adult NWS (flies).

No single therapy should be assumed to be 100% effective. Implementation of a multi-faceted program is considered critical.

APPLICATION DIRECTIONS

Refer to the full EPA-registered label for Co-Ral™ Fly and Tick Spray for complete use directions and restrictions including dosage, concentration, and application frequency requirements for use on cattle and horses.

TARGET ANIMAL	APPLICATION INSTRUCTIONS
Beef and Dairy Cattle	Vehicle-Mounted Sprayers: Mix 1 gallon of Co-Ral Fly & Tick Spray per 100 gallons of water in tank. The droplet size of the sprayer nozzles should be greater than 1 mm. For Use on Animal Feeding Operations (AFOs) or Small Cattle Operations (<100 head of cattle) only. Only apply to cattle in an open-air, fenced area such as a corral. Applications may be made by ATV or tractor only. Sprayers must be directed toward the intended application site while spray is active. Backrubbers: Mix 9.75 oz. (95 mL) of Co-Ral Fly & Tick Spray per 1 gallon of any backrubber oil approved for use on livestock. Do not mix with home furnace oil (fuel oil) or diesel fuel. Saturate the fiber portion of the backrubber with this mixture. Place the backrubber where animals congregate or travel regularly. For dairy cattle suspend at a height that will prevent straddling. Resaturate backrubber as needed. Note: For most effective face fly control, the rubber should be constructed so as to permit the animal to rub its face. No interval is required between treatment and slaughter or use of milk.
Horses	Handheld Sprayer: Add 2.5 oz. Co-Ral Fly & Tick Spray per gallon of water and mix thoroughly. For example: 10 oz. spray with 4 gallons of water; 25 oz. spray with 10 gallons of water.

IMPORTANT: Read the entire Directions for Use and the Limited Warranty and Limitation of Damages before using this product.
